

## Instructions for Authors

**Neues Jahrbuch für Mineralogie** provides information on the progress of mineralogy in its widest sense including crystallography, petrology, geochemistry and the science of mineral deposits. Neues Jahrbuch für Mineralogie is indexed in Science Citation Index and Current Contents. All manuscripts are peer-reviewed.

New scientific findings and thorough detailed studies are emerging at an ever increasing rate. All papers will therefore be published with the least possible delay within about 6-8 months after having been accepted by the Editor in charge.

### Submission of papers

For the **review process** submission of manuscripts in pdf-, doc- or rtf-format with all figures, tables and fonts included is acceptable. If you cannot create a pdf file please submit three hard copies of your manuscript along with 1 set of high quality printouts of figures. For submission of your **final (revised)** paper please send **two high quality printed copies** of text and tables along with **one set** of original figures (photographs on white high-gloss paper and, if necessary, with a scale bar on each picture; figure legends must be supplied on separate sheets) and **one electronic version** of the manuscript (see Illustrations and Data Format, page 2) to the chief editor:

Prof. Dr. Heinz-Günter Stosch  
Institut für Angewandte Geowissenschaften  
Universität Karlsruhe  
Kaiserstr. 12  
76131 Karlsruhe / Germany  
ph: [49] 721 608 3324  
ph: [49] 721 608 3316 (sec.)  
fax:[49] 721 608 3374  
E-mail: stosch@agk.uka.de

Authors in North America should write to:

Prof. Dr. Gene C. Ulmer  
Temple University, Geology Department  
Beury Hall, Philadelphia, PA 19122, USA  
phone: +1 (215) 204-7171 fax: -3496  
E-mail: gulmer@temple.edu

for the fields *crystallography*, *mineralogy*  
and *mineral deposits*.

Submission of a manuscript for publication in the Neues Jahrbuch für Mineralogie is considered binding assurance that this work has not been and will not be published elsewhere in this form and length.

**Page charges** are not expected for regular papers.

### Copyright

With acceptance and publication of a manuscript the exclusive copyright for every language and country is transferred to the publishers. The copyright covers the exclusive rights to reproduce and distribute the article including reprints, microfilm or any other reproduction and translations.

### Manuscript Structure and Layout

Manuscripts should be written in English. If manuscripts exceed 25 printed pages please contact the editor prior to submission. They must be ready for printing; this means prepared by word processor or typewritten, with double-spaced lines, on one side of the paper and paginated. To avoid confusion with spacing, block-text and right-justification should be avoided.

Please structure the manuscripts in the following way:

Title page, abstracts, key words, text, acknowledgements, references, tables, figure captions and figures.

The **title page** contains title, name of authors with first name given in full. Non English language papers must contain an English translation of the title and the captions.

A short **English abstract** is placed after the title.

At the end of the abstract the authors should propose up to ten **key words**.

A short paragraph mentioning and, if necessary, explaining, the **instrumental equipment** and/or methods applied to obtain the results of the investigations, should be included in the paper. Use the International System of Units (SI).

The full **addresses** of all authors should be quoted at the end of the paper.

### Illustrations and Electronic Data Format

All illustrations must be labelled with the authors' names and the figure numbers. They will be printed within the text, should be numbered consecutively and all details must be clearly readable when reduced to the printing area (17,5 x 23,5 cm)

Figures that need special layout, such as side by side (or over and under) for direct comparative purposes should be marked as such.

Files of the manuscript, the figures and the graphs should meet the following requirements: **Text** preferably written with MS-Word (please indicate software version); all fonts embedded. You may underline words to be printed in *italics* or double-underline words for **boldface** (titles, sub-titles, volume numbers in references). Dash-underlining signifies SMALL CAPS (for authors' names), they must not be underlined, however, if they have already been written in capitals or boldface.

Please do not use pervasive capitals for titles, headlines and section headings.

**Figures and graphs:** tif- or eps-files, (in exceptional cases jpeg-files may be used) minimum 600 dpi. Please ensure to embed all fonts when submitting eps-files. Color figures will be printed against costs; please contact the publisher for details.

For adequate documentation of **powder X-ray diffraction data**, please follow the procedures given in Acta Crystallographica A 39, 174-186, Appendix III.

## Citation

When abbreviating journal titles, authors are requested to use, if possible, the German standards for journal abbreviations, DIN 1502. Otherwise journal titles should be abbreviated in accordance with international practice (as stated in the rules of "Chemical Abstracts"). For example:

STRECKEISEN, A.L. (1967): Classification and Nomenclature of Igneous Rocks (Final Report of an Inquiry). – N. Jb. Miner. Abh. **104**: 114-240.

STRUNZ H. & NICKEL, E. H. (2001): Strunz Mineralogical Tables: – 9th Ed., Schweizerbart'sche Verlagsbuchhandlung, Stuttgart, Germany, 870 pp.

All publications referred to in the text of the paper must be included in the reference list.

## Fast Track publication (Pre-Print-Publication)

Since 2005 (NJB Vol. 181/1) manuscripts that are ready to be printed (e.g. accepted by the editors, composed and the proofs checked by the authors) are made available online prior to publication. Title and abstracts as well as authors names will be accessible by all visitors of the NJB online version. Full Text will be available for online journal subscribers. Papers will have a DOI (*Digital Object Identifier*) assigned and may be cited.

This new service will give the opportunity to have articles available well in advance of their actual printed publication date. A special **Fast Track Articles** table of contents will be accessible on the journals online website (Ingenta). As soon as an article is published in print, it will be automatically removed from the **Fast Track** TOC. Papers published via Ingenta Fast Track will carry a footnote: Received (*date*), published online (*date*).

## Citation of Fast Track articles

Fast Track articles published prior to print publication must have a DOI (*Digital Object Identifier*) assigned to be found in databases. This number will be assigned by the publisher. As page numbers will not be available when placing a Fast Track publication, please cite Fast Track articles in the following format:

STURM, R. (*year of online publication*): Volume balancing in ductile shear zones by the quantification of accessory zircon in oriented thin sections. N. Jb. Miner. Abh. published online July 1<sup>st</sup>, 2004; DOI: 10.1127/0077-7757/2004/0054.

**After** the paper has been published in print please cite as following:

STURM, R. (*year of print publication*): Volume balancing in ductile shear zones by the quantification of accessory zircon in oriented thin sections. N. Jb. Miner. Abh. **180**: 171-191. Published online July 1<sup>st</sup>, 2004; DOI: 10.1127/0077-7757/2004/0054.

When receiving your galley proofs please check, if articles cited as online publication have been printed in the meantime. If so, please update the citation.

In Fast Track articles CrossRef linking of references will not yet be possible. As soon as the paper is published in print, the Fast Track publication will automatically be removed and CrossRef links will be available. As the publication date for Fast Track articles will be the date of going online, corrections in the paper will only be possible as Errata pages.

## Proofreading

After acceptance of their papers, authors (the first-named author for multi-author-papers) will receive two sets of page proofs prior to final printing. In order to speed publication, we request that one set of the corrected page proofs is returned immediately to the publishers. In cases where the author is prevented from making corrections, he should appoint a representative to check the proofs. If the page proofs are not returned in time, the paper will be published exactly as it appears in the uncorrected page proofs.

Neither formal alterations nor other changes should be included in the proofs. Authors will be charged for any alterations which they make to a proof unless they are corrections of printer's errors.

## Reprints

Authors will receive 50 reprints free of charge or alternatively a pdf-file; additional reprints can be ordered at cost.

## Online Access

Since 2002 Neues Jahrbuch für Mineralogie is available online through Ingenta. It is part of the CrossRef service which allows direct access to referenced papers (published in this or other journals) which are available online. Conversely, papers in other journals are able to reference papers published in Neues Jahrbuch für Mineralogie by placing direct reference links.

## Editorial Board

Anton Beran, Universität Wien (*mineral spectroscopy, mineralogy*)

Thomas Fehr, Universität München (*kinetics, applied mineralogy, structural and thermodynamic properties of minerals*)

Gerhard Franz, Technische Universität Berlin (*petrology, crystal chemistry, experimental mineralogy*)

Wilhelm Heinrich, GeoForschungsZentrum Potsdam (*experimental Petrology, fluid-rock interaction*)

Reiner Klemd, Universität Erlangen-Nürnberg (*economic geology, HP and UHP metamorphic petrology, precambrian geology*)

Thomas Neumann, Universität Karlsruhe (*sediment geochemistry, sedimentology, low-temperature geochemistry*)

Wolfgang Schmahl, Universität München (*crystallographic phases analysis and characterisation, mineral surface processes, applied mineralogy*)

Wolfgang Siebel, Universität Tübingen (*geochemistry of crust and mantle, geochronology, isotope and trace element geochemistry, granite petrology*)
