Daniel Falck; Samuli Lehtonen:

Nomenclator *Clematidum* – Compendium of all generic and infrageneric names of *Clematis* s.l. (Ranunculaceae) around the world

2026. V, 112 pages, 3 tables, 31 x 23 cm

ISBN 978-3-510-48037-1,

paperback 109.– €

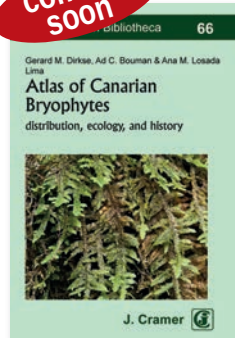

www.schweizerbart.com/9783510480371

This monograph is the first comprehensive treatment of the convoluted nomenclature of all generic and infrageneric designations and names above the rank of species that, according to current understanding, belong to the genus *Clematis* (Ranunculaceae). The large and horticulturally highly significant genus *Clematis* has a complex taxonomic and nomenclatural history. This resulted in the widespread use of nomenclaturally erroneous names in works dealing with the genus even up to day.

Through a total of 372 entries, the authors examine designations and names published in botanical literature, from the nomenclatural starting point, Linnaeus's *Species plantarum*, up to present day, and evaluate each of them through a rigorous nomenclatural filter. Many names in common use are shown to be nomenclaturally problematic in one way or another.

Atlas of Canarian Bryophytes distribution, ecology, and history

2026. 21 x 14 cm

(Bryophytorum Bibliotheca Vol. 66)

ISBN 978-3-443-62038-7, paperback

www.borntraeger-cramer.com/9783443620387

The Canary Islands are situated in the Atlantic Ocean, west of Morocco (Africa), and north of the Tropics. The

Atlas of Canarian Bryophytes provides the first comprehensive insight into the local distribution of Canarian bryophytes, including 3 species new to science. Each of 453 native bryophyte species is accounted for: accepted name, Canarian distribution map, local commonness, ecology (habitat and associated bryophytes), altitudinal range (altitude to longitude diagram), commentaries and notes on first Canarian reports or taxonomic history. Technically, the atlas summarizes about 35.000 packet labels of herbarium packets containing bryophytes collected on numerous expeditions between 1984 and 2019. Collecting followed the geographical scheme of UTM 5 x 5 km squares.
